Feedback highlights

Q: Are there any relevant subjects or topics which appear to be missing from the framework?

- How to work with limitation
- Evaluation - how to evaluate student's performance in different stages, any guidelines/ criteria etc.
- Implementation plan and schedule
- Personal knowledge of the art, the background of the audience.

Q: In what way you would say the framework is beneficial toward Art and Design Education?

- Student can learn art in a more fun and effective way. And this can help develop the creativity of the students.
- It helps setting curriculum. Teachers can have clues on what to teach, especially when the students don't know what they want (like a bit lost), teachers can have something to guide/ inspire them.
- Its useful to those students who don't have motivation to start their project in the first stage ~
- The framework can help students to learn basic art-related knowledge and skills. Also, students can be stimulated to be more creative and unique. Overall, the framework can help training students who want to be designer or artist.
- Student can learn art in a more fun and effective way. And this can help develop the creativity of the students.
- It provides a comprehensive guidance for students on how to create a complete new product or generate new ideas step by step.

Q: According to your personal occupation or experiences, would you use the framework as your own practices? And why?

- Yes, but in a different ratio of each stages for different occupation. Speaking as an art teacher for children/teenagers, I think stage 1&2 will be important as they will have to learn the basic before they start creating their own art. Art is not about making new things . It's rather about how to see things in your own way. So before you see in your way, you will have to know how others saw it. But as an art student, I think stage 4 should take a bigger part as I would like to spend more time on developing my own project. In this stage, skills and knowledge should not be my major concerns.
- As I am studying engineering, I would begin with conceptual studies before hands-on or rapid production. It is because we have to understand the logic of circuits or software or any devices before really doing hands-on projects. Or else, we would not know what we are actually doing. I believe this is the same for science students, who would need to understand theory and logic before really doing their labs.
- Maybe. Depends on the personalities and age of the educated people.
- I would because it really helps us to break down a thing pieces by pieces and then we can achieve the goal by small steps.
- Will use, each industry will go through these steps.
- Yes, gave the students of high autonomy

Q: Do you think the framework can be useful apart from the art and design/ educational purpose?

- The concept can also be applied in science field.
- Yes. those 3 elements suggested are also important in other field as the technique of mixing theory and creativity is needed in modern society.
- I believe it would be helpful for any educational purpose apart from art and design.
- Can be substituted for each education program, all subjects must learn the basic knowledge, and then practice.
- It seems that in the era of information technology, the guide lacks vivid and tedious.

Q: Please give any further suggestion on the establishment of the framework.

- Need more detail on the concepts underlining each stage rather than what each stage will offer the participant
- Think about the ratio of each stages for different education level.
- I believe it could be a guide for teachers planning for courses. However, I believe experienced teachers should tailor make courses for student development. It is because this framework would not always work for every subject.
- Enhance the presentation, such as the insertion of an example of the picture.
